

PulseEDU

Demo Guide

A complete, step-by-step walkthrough of every module — built for demoing PulseEDU to a brand-new school or district. Covers Hall Pass, PBIS Hub + Stores + Spotlight, Digital Signage, Safety Plans, MTSS, Parent Portal, Parent Pickup, Insights, Investigations, ISS, Data Importer, and Settings / Onboarding.

Read chapter 1 ('Before You Demo') once, then keep this PDF open in a second monitor during the demo. Each feature page tells you who in the audience cares, where to click, what to say, and what to watch out for.

Contents

- 1. Before You Demo
 - What PulseEDU Is
 - Suggested 30-Minute Demo Order
- 2. Logging In & The Sidebar
 - Sign In
 - Read the Sidebar
- 3. Roles & Who Sees What
 - Role-by-Role Cheat Sheet
- 4. Admin Hub — Today at a Glance
 - Open the Admin Hub
- 5. Hall Pass
 - Issue a Pass (Teacher View)
 - Hall Pass Queue (Admin View)
- 6. Digital Signage (Display Management)
 - Configure a Playlist
 - PBIS House Standings on Signage
- 7. PBIS Hub, Spotlight & Stores
 - Award PBIS Points
 - Spotlight Reveal
 - Classroom Store vs School Store
- 8. Safety Plans
 - Create / Edit a Safety Plan
- 9. MTSS Intervention Plans (Tier 2 / Tier 3)
 - Launch a Tier 2 / Tier 3 Plan
 - Weekly Progress Logging
 - Intervention Reports
- 10. Teacher Roster
 - Open Your Roster
- 11. Parent Portal
 - Invite a Parent
 - Parent View
- 12. Parent Pick-Up Module

- *Curb Keypad (Phone-First)*
 - *Walker Gate*
 - *Tag Admin (Issue, Reissue, Print)*

 - *Settings Hub*
 - *Onboarding Checklist*
 - *Staff & Roles*
 - *Bulk Feature Picker*
 - *District / SuperUser Tools*
- **17. Closing the Demo**
 - *What to Leave Them With*

1. Before You Demo

A 30-second prep so the demo lands. Skim this once, then never again.

What PulseEDU Is

Audience: You (the demonstrator).

Where to find it: —

What it is: PulseEDU is one school-operations app that replaces 6–10 single-purpose tools: digital signage, hall pass, PBIS / house points and store, safety plans, MTSS tier-2/3 intervention plans, parent portal, parent pickup line, insights dashboards, data importing, and behavior investigations. It is multi-tenant — every district / school / role sees a different slice.

STEPS

1. One product, many roles.
Teachers, admins, counselors, PBIS coordinators, MTSS coordinators, deans, ESE coordinators, behavior specialists, front-office, parents, and a 'SuperUser' for the district all log into the same app and see only what they're entitled to.
2. Multi-tenant by school.
Every record (student, plan, point, pass, tag) is scoped to a school_id. A district admin can switch schools; a teacher cannot see students from another school.
3. Feature licensing.
Districts can turn whole modules on or off per school (e.g. one school uses Pickup, another doesn't). What the demo audience sees is governed by the school's plan.

TIPS

- Demo against a seeded school with realistic-looking names (not 'Test Student 1'). The seed script creates one.
- Open with the Admin Hub — the audience is almost always an admin or a Core Team member with admin-ish vision.

Suggested 30-Minute Demo Order

Audience: You.

Where to find it: —

What it is: A proven order that flows from 'what the audience sees today' to 'what they get tomorrow.' Skip any section that doesn't apply to that school's plan.

STEPS

1. Minute 0–2 — Login & sidebar.
Land on Admin Hub. Point out role-based sidebar.
2. Minute 2–6 — Hall Pass + Digital Signage.
These are visible / visceral. They sell the rest.
3. Minute 6–11 — PBIS Hub + Spotlight + School Store.
The 'culture' loop teachers love.
4. Minute 11–15 — Parent Pick-Up Module.
Curb keypad !' tag !' walker gate. Always gets the room talking.
5. Minute 15–20 — MTSS Plans + Safety Plans + Teacher Roster.
The 'student support' core. Teacher Roster is where everything converges.
6. Minute 20–24 — Parent Portal.
Open the invite flow. Open the parent view. Show the PDF export.
7. Minute 24–28 — Insights Dashboards + Data Importer.
Numbers + how data gets in.

8. Minute 28–30 — Onboarding + Settings Hub.
Close with 'this is your first week of setup.' De-risks the buy.

TIPS

- Resist the urge to show every screen. The point is to make the buyer trust that the screens they didn't see also work.
- Always end on Onboarding — it shows the path forward, not a wall of features.

2. Logging In & The Sidebar

The first 30 seconds the audience sees. Get them comfortable with where everything lives.

Sign In

Audience: All users.

Where to find it: / (root) when signed out !' redirected to login.

What it is: Email + temp password on first login, then a password reset. Admins can reset any staff member to a fresh temp password from Staff & Roles.

STEPS

1. Open the app URL in a browser tab.
If the staff member's email is registered, they're prompted for a password.
2. First-time login uses the temp password the admin set.
Force-change is built in.
3. After login, you land on the role's default home.
Teachers land on Teacher Hub; Admins on Admin Hub; SuperUsers on SuperUser Home.

TIPS

- If a staff member is stuck, an admin can issue a fresh temp password from Admin Hub !' Staff & Roles !' row menu !' 'Reset to temp password.'

Read the Sidebar

Audience: All users.

Where to find it: Left rail.

What it is: The sidebar is role-aware — it never shows something the user can't open. Sections collapse so the rail stays short.

STEPS

1. Top section: today's work.
Hub (Admin / Teacher / PBIS / MTSS Coordinator), Hall Pass, Student Search, PBIS.
2. Middle section: student support.
Safety Plans, MTSS Plans, Intervention Reports, Trusted Adults.
3. Operational tools.
Display Management (signage), Pickup, Bell Schedules, Cameras, Data Importer.
4. Insights.
Engagement / Behavior / Academics / SEB-SEL / Equity / Early Warning dashboards.
5. Admin & Tenancy.
Settings, Onboarding, Staff & Roles, Parent Access, District Admin, SuperUser Home.

TIPS

- If an item is missing for a logged-in user, it's a role-flag question — not a bug. See chapter 3.

3. Roles & Who Sees What

Buyers always ask this. Keep this page open in a second tab during the demo.

Role-by-Role Cheat Sheet

Audience: Buyer / admin.

Where to find it: Reference only.

What it is: Every staff user can carry multiple role flags. The sidebar shows the UNION of everything those flags unlock.

STEPS

- 1. SuperUser.**
District-wide. Sees every school, every feature. Manages tenancy, plans, license toggles.
- 2. District Admin.**
Sees every school in the district as an Admin. Cannot edit tenancy.
- 3. Admin.**
Full school admin: Settings, Staff & Roles, Hall Pass admin, PBIS admin, Pickup admin, Investigations, ISS dashboard, Onboarding.
- 4. Behavior Specialist / Dean / MTSS Coordinator / ESE Coordinator.**
Core Team. See Investigations, MTSS Plans (most), Safety Plans (view + edit for Counselor/MTSS), behavior list admin, Verify Pullouts.
- 5. Guidance Counselor / School Psychologist.**
Safety Plans (edit). Counselor also gets Pickup tag management.
- 6. PBIS Coordinator.**
PBIS Hub, PBIS Reasons, milestone emails, School Store editing.
- 7. Teacher.**
Teacher Hub, Teacher Roster, Hall Pass (subject to allowlist), PBIS award, Classroom Store.
- 8. Front Office / Confidential Secretary.**
Pickup tag management; office-only tiles in Admin Hub.
- 9. Parent.**
Logs into a separate Parent Portal (different URL path).

TIPS

- Flags are set in Admin Hub !' Staff & Roles. Bulk-assign is available there too.
- If a school doesn't license a module, the sidebar item is hidden for everyone — even SuperUser at that school.

4. Admin Hub — Today at a Glance

The home screen for every admin and Core Team member. Treat it as the demo's 'living room.'

Open the Admin Hub

Audience: Admin, Core Team.

Where to find it: Sidebar !' Admin Hub.

What it is: Real-time tiles showing what's happening in the building right now: hall passes out, ISS arrivals today, recent behavior events, tardies, Pickup 'still on campus' after cutoff.

STEPS

1. Land on Admin Hub.
Tiles auto-refresh every few seconds.
2. Click any tile to drill in.
Hall pass tile !' live queue. ISS tile !' ISS dashboard. Pickup 'still on campus' tile !' reconciliation list.
3. Look for the bell icon (top right).
Notifications: MTSS plans about to lapse, Spotlight re-spin alerts, AST consistency-check flags.

TIPS

- Hub tiles are role-gated. A counselor's hub is lighter than an admin's; a SuperUser's adds district rollups.

5. Hall Pass

Visible everywhere, real-time, gamified just enough. Start the demo here when possible.

Issue a Pass (Teacher View)

Audience: Teacher.

Where to find it: Sidebar !' Hall Pass !' New Pass.

What it is: Teacher picks the student, picks the destination, and confirms. The pass is on a live queue visible in the hall and at the admin hub.

WHAT TO SAY

Pretend you're a teacher. Show how fast it is — name !' destination !' done. Then jump to the admin view in another tab and show the same pass live.

STEPS

1. Click 'New Pass.'
Type-ahead by name or student ID.
2. Pick the destination.
If the destination is on this teacher's allowlist (their nearest restroom, the room next door), it goes immediately.
3. Off-allowlist destinations require 'I've contacted them.'
Friction by design — discourages random wandering, encourages staff coordination.
4. Pass appears on the live queue at the Admin Hub.
Color-codes by elapsed time.

TIPS

- Allowlist is edited at Settings !' Allowlist. Use the new 'select all' column header to grant a location to every teacher in one click.
- The Locations list (which becomes the columns in the allowlist) is edited at Settings !' Locations.

Hall Pass Queue (Admin View)

Audience: Admin, Hall Pass admin.

Where to find it: Sidebar !' Hall Pass !' Queue.

What it is: Every active pass, sorted by elapsed time, with one-click close, escalate, or assign-camera-review. Auto-resets per bell-schedule period.

STEPS

1. Watch the live queue.
Each row: student, teacher, destination, elapsed.
2. Pass over the time-elapsed threshold turns warning-colored.
Stale passes float to the top.
3. Click a pass to close it or add a note.
Closed passes feed into the student's HeartBEAT timeline.
4. Period changes auto-reset the queue.
Configure a default bell schedule first — Settings !' Bell Schedules !' set default.

TIPS

- If no default bell schedule is configured, the queue falls back to 45-minute idle buckets. Workable, but the period reset is the real magic.

WATCH OUT FOR

- If a teacher's allowlist is too permissive, the contact-confirm guardrail does nothing. Keep allowlists small.

6. Digital Signage (Display Management)

Big visual wins. If the school has any TV in a hallway, show this.

Configure a Playlist

Audience: Admin / PBIS Coordinator.

Where to find it: Sidebar !' Display Management.

What it is: Per-school, per-TV playlists. Mix images, video, audio, PDF, and live tiles: PBIS house standings, active hall passes, Heartbeat signage, Spotlight reveal.

STEPS

1. Open Display Management.
Lists each registered display.
2. Create a playlist or pick an existing one.
Add items: media (image/video/audio/PDF) or live tiles.
3. Set a schedule.
When the playlist plays (school hours, after lunch, etc.).
4. Assign the playlist to one or more TVs.
Each TV opens /signage/<TV-id> on a browser kiosk.

TIPS

- Heartbeat signage is the auto-curated highlight reel: house standings, top recent PBIS awards, today's Spotlight reveal.
- Use the classroom signage tile (filtered to that teacher's roster) for in-classroom TVs that show only that classroom's pickup status.

PBIS House Standings on Signage

Audience: Whole school.

Where to find it: Auto-included tile in playlists.

What it is: Live house bar chart. Updates when teachers award points. Built-in 'runaway leader' rebalancer so one house can't snowball the year.

STEPS

1. Add the 'House Standings' tile to a playlist.
Renders as a vertical bar chart with each house's color.
2. Spotlight reveal lives in the same tile.
When a teacher 'spotlights' a student, the points and student name appear briefly on signage.

TIPS

- Spotlight is governor-throttled: when standings diverge by more than 1,500, the lagging houses draw from higher-value pools. The number shown to the teacher is the number the DB stores — no surprises.

7. PBIS Hub, Spotlight & Stores

The culture engine. Teachers love this. Show the full loop: award !' spotlight !' store.

Award PBIS Points

Audience: Teacher / staff.

Where to find it: Sidebar !' PBIS, or PBIS Hub.

What it is: Pick a student (or a roster, or a house), pick a reason, award. Points roll into the student's HeartBEAT and the house standings.

STEPS

1. Open the PBIS Hub.
Search bar, recent awards, house bars.
2. Click 'Award.' Pick a student.
Type-ahead.
3. Pick a reason.
Reasons are configured per school — Settings !' PBIS Reasons.
4. Submit.
Shows on signage instantly; logs to HeartBEAT.

TIPS

- PBIS reasons are managed at Settings !' PBIS Reasons. Encourage schools to keep the list short and meaningful ("d 8 reasons).

Spotlight Reveal

Audience: Teacher.

Where to find it: PBIS Hub !' 'Spotlight.'

What it is: A randomized 1–10 point bonus for a single student, designed to feel like a slot reveal. Pools are house-aware (rebalancer keeps the race tight). The teacher sees the value before they submit; the DB stores exactly that value.

STEPS

1. Click Spotlight.
Pick a student.
2. Reveal animation runs.
Shows the awarded point value.
3. Confirm.
Re-validates standings — if standings shifted mid-reveal, prompts a 're-spin' (409).

TIPS

- Spotlight is intentionally lightweight on signage — a 2-second flash, no audio. Schools running quiet halls have asked for that.

Classroom Store vs School Store

Audience: Students; teachers issue.

Where to find it: PBIS Hub !' Stores.

What it is: Two reward catalogs. Classroom Store is per-teacher (each teacher manages their own inventory). School Store is school-wide (admin + PBIS coordinator manage; teachers can only spend on behalf of students).

STEPS

1. Browse a store.
Each item has a thumbnail, cost, and inventory.
2. Pick an item for a student.
Student's points are debited; inventory drops by one.
3. Admins manage School Store inventory at PBIS Hub !' School Store admin.
Teachers see read-only School Store.

TIPS

- Item thumbnails use the object storage ACL so each school's images are tenant-isolated.

8. Safety Plans

Counselor / Core Team feature with quiet but huge schoolwide reach. Show the staff-facing checklist.

Create / Edit a Safety Plan

Audience: Guidance Counselor, Core Team.

Where to find it: Sidebar !' Safety Plans.

What it is: Per-student behavioral and physical safety checklist. Library of pre-baked items, free-text additions, role-based access (Counselor/Core Team edit; all staff view), full audit log.

STEPS

1. Open Safety Plans.
List of active plans + deactivated archive.
2. Create a new plan for a student.
Pick from library or add custom items.
3. Save. Plan immediately surfaces on the student's profile, teacher roster, and pickup curb confirmation.
The team is now operating from the same checklist.
4. Deactivation requires a reason.
Logged in the audit trail.

TIPS

- Items typed once into the library become reusable across plans — encourages consistent language.

WATCH OUT FOR

- Plan edits go live instantly. Coordinate with classroom teachers if the change is material (e.g., new restraint protocol).

9. MTSS Intervention Plans (Tier 2 / Tier 3)

Counselors / MTSS Coordinator workflow. Show the goal-setting and the weekly progress log.

Launch a Tier 2 / Tier 3 Plan

Audience: MTSS Coordinator, Core Team.

Where to find it: Sidebar !' MTSS Plans.

What it is: Per-student intervention plan with a tier, goals, strategy category, weekly monitoring rows, and a completion / outcome report.

STEPS

1. Open MTSS Plans.
Active list + completed archive.
2. Launch a new plan.
Tier-aware launcher: picks the right template by tier.
3. Set goal(s) and target.
Quantitative target the weekly check-ins compare against.
4. Pick strategy category.
Drives the suggested weekly observation rows.
5. Save.
Plan now appears in the student profile and on the MTSS Coordinator hub.

TIPS

- Plans about to lapse (within 14 days of their end) appear on the MTSS Coordinator hub and trigger a bell notification.

Weekly Progress Logging

Audience: MTSS Coordinator, Core Team.

Where to find it: MTSS Plans !' individual plan !' 'Weekly Log.'

What it is: One row per week. Score, observation note, optional school-wide expectations row (the PRIDE / ROAR row).

STEPS

1. Open the plan's Weekly Log tab.
Past weeks listed; new-week row pre-filled.
2. Score the goal.
Numeric or qualitative depending on goal type.
3. If the plan opted in to school-wide expectations, score the expectation row.
Row label comes from Settings !' School-wide Expectations (PRIDE / ROAR / etc.).
4. Save.
Trend chart on the plan updates.

TIPS

- The expectation acronym AND each letter!'word mapping are now editable in Settings !' School-wide Expectations.

Intervention Reports

Audience: MTSS Coordinator, PBIS Coordinator, Admin.

Where to find it: Sidebar !' Intervention Reports.

What it is: Cross-student rollup: completion rate, score trends, strategy usage, and PRIDE / expectation breakdown.

STEPS

1. Open Intervention Reports.
Filters: grade, window, strategy.
2. Drill into any cohort row.
Lists plans + outcome.

10. Teacher Roster

The teacher's home for student support. Show one teacher's view.

Open Your Roster

Audience: Teacher (any), Core Team (any teacher's).

Where to find it: Sidebar !' Teacher Roster.

What it is: Every student assigned to that teacher with FAST scores, ESE / 504 / ELL flags, Safety Plan indicator, active MTSS plan indicator, and quick-actions.

STEPS

1. Open Roster.
Default: my own classes. Core Team picks any teacher from a dropdown.
2. Each student row shows badges.
ESE / 504 / ELL / Safety Plan / Active MTSS / FAST tier.
3. Click a row to open the student profile.
Full HeartBEAT timeline.

TIPS

- Core Team members can switch into any teacher's roster — useful for prepping a Tier 2 cohort meeting.

11. Parent Portal

Closes the loop with families. Always demo with the admin invite flow first, then the parent view.

Invite a Parent

Audience: Admin.

Where to find it: Sidebar !' Parent Access.

What it is: Issue a secure invite to a parent / guardian. Configure which sections of HeartBEAT they can see (PBIS, hall passes, tardies, accommodations, staff notes).

STEPS

1. Open Parent Access.
Search for the student, view current authorizations.
2. Click 'Invite parent.'
Enter the email; pick which sections are visible.
3. Send.
Parent receives an email with a secure first-login link.

TIPS

- Sibling switching is automatic — if a parent has invites for multiple kids, they switch with a dropdown.

Parent View

Audience: Parent.

Where to find it: /parent/ on the same URL.

What it is: Read-only HeartBEAT for their student(s). Filters and PDF export. No teacher chat, no PII beyond what the admin enabled.

STEPS

1. Parent logs in at /parent/.
Different bundle, different layout.
2. Sees their student's HeartBEAT.
Sections governed by what the admin enabled.
3. Click 'Export PDF.'
Generates a tidy report for parent-teacher conferences.

TIPS

- Sibling dropdown sits top-left. Useful when families have multiple kids at the same school.

12. Parent Pick-Up Module

The 'wow' moment of most demos. Walk through the three surfaces.

Curb Keypad (Phone-First)

Audience: Front office / car-rider staff.

Where to find it: /pickup/curb on the front-office computer.

What it is: Numeric keypad. Type a parent's phone (or 4-digit tag #). Sibling rollup shows every kid that parent is authorized to take — scoped to the typed parent. Restricted-tag override requires justification.

STEPS

1. Type the parent's phone number.
Sibling rollup appears as you type.
2. Confirm pickup.
Each student is added to the dismissal queue.
3. Restricted-tag overrides require a typed justification.
Audit logged to pickup_queue_events.

TIPS

- Curb is intentionally keypad-only — designed for a single shared touch monitor or rugged tablet at the curb.

Walker Gate

Audience: Front office / walker-gate staff.

Where to find it: /pickup/walkers.

What it is: Bell-window-enforced gate. Only walkers tagged for the active dismissal window appear. Confirm walker-by-walker as they leave.

STEPS

1. Open the walker gate during dismissal.
List filtered to walkers active right now.
2. Tap each walker as they leave.
Logged with timestamp.

Tag Admin (Issue, Reissue, Print)

Audience: Admin + Core Team + Counselor + Front-Office + Confidential Secretary.

Where to find it: Pickup Admin section.

What it is: Bulk start-of-year assignment, lost-tag reissue, extra-guardian splits, single and batch PDF tag printing with QR codes. 80%-of-range capacity warning.

STEPS

1. Bulk assign.
Allocates a tag # per student from the school's range.
2. Reissue a lost tag.
Mark old tag inactive, issue new number.
3. Print.
Single or batch PDF with QR code; print on cardstock.

TIPS

- Default tag range is 4-digit (1001–9999) — ~8,999 slots per school. The 80%-warning fires when a school exceeds ~7,200 active tags.

WATCH OUT FOR

- Teachers are explicitly excluded from tag management — by design, the role gate (canManagePickup) admits only admin / Core Team / counselor / front-office / confidential secretary.

'Still on Campus' Tile

Audience: Admin.

Where to find it: Admin Hub.

What it is: After the dismissal cutoff, this tile lists students who haven't been picked up or marked walked. Grouped by dismissal mode.

STEPS

1. Tile turns on after the cutoff.
Empty when everyone's accounted for.
2. Click any name to mark dismissed manually or escalate.
Common case: after-school program pickups not yet logged.

13. Insights Dashboards

Where buyers go from 'cool features' to 'this answers my SIP questions.' Show two or three; mention the rest.

Tour of the Dashboards

Audience: Admin, Core Team, MTSS Coordinator.

Where to find it: Sidebar !' Insights.

What it is: Six dashboards: Engagement, Behavior, Academics, SEB/SEL, Equity, Early Warning. Each has filters (grade, window), demographic disaggregation, drill-down to student profile, and a top-N list.

STEPS

1. Open Insights !' Engagement.
Attendance trend, tardy rate, hall-pass density.
2. Open Insights !' Behavior.
Incident counts, top reasons, by grade, by demographic.
3. Open Insights !' Academics.
FAST score windows, growth, top-N at risk.
4. Open Insights !' SEB/SEL.
Self-report surveys and PBIS rollups.
5. Open Insights !' Equity.
Demographic disaggregation of behavior + academics.
6. Open Insights !' Early Warning.
Composite signal: attendance + behavior + academics. Click any student to drill in.

TIPS

- Every dashboard accepts the same window filter. Default is the current grading period.

14. Data Importer

Critical for onboarding. Show a CSV upload, the preview, the commit, and the rollback.

Import Rosters / Assessments / Behavior

Audience: Admin, Data Coordinator.

Where to find it: Sidebar ! Data Importer.

What it is: Generic importer. Three template families: roster, assessment, behavior. Upload CSV ! template mapping ! preview ! commit ! rollback if needed.

STEPS

1. Pick the template (Roster, Assessment, Behavior).
Each template lists required columns + sample CSV.
2. Upload the CSV.
Server parses, validates row by row.
3. Preview.
Shows what will change (new rows, updated rows, skipped rows with reason).
4. Download skipped-rows CSV if any.
Fix and re-upload only the skipped rows.
5. Commit.
Applies. Job appears in 'Recent imports.'
6. Rollback any committed job from 'Recent imports.'
Reverts that import, leaves other imports intact.

TIPS

- Roster importer is strict on house names — must match an existing house exactly. Did-you-mean suggestions help.
- Every import job is reversible. Encourage teams to commit early and often; rollback exists.

15. Behavior Investigations & ISS

Core Team feature. Show how a behavior incident becomes an investigation, then an ISS assignment.

Open Investigations (Watchlist)

Audience: Admin, Core Team.

Where to find it: Sidebar ! Investigations.

What it is: Active and resolved behavior cases. Each case can attach statements (student / staff / witness), evidence, AI consistency check results, and outcome notes.

STEPS

1. Open Investigations.
Cases sorted by activity.
2. Open a case.
Header: student, opened-by, status. Tabs: statements, evidence, AI checks, notes, outcome.
3. Attach a statement.
Statements can be loose, then promoted to a case (one-way).
4. Run AI Consistency Check.
Cross-checks statements for contradictions. Findings logged for telemetry.
5. Close out ! Behavior Review.
Behavior Review tab is where Behavior Specialist closes completed pullouts with their outcome notes.

TIPS

- Statement numbering uses a stable per-case scheme (data layer shipped; UI surfacing in progress).

WATCH OUT FOR

- Promoting a loose statement to a case is one-way; cannot un-attach without an audit trace.
- Closing a case prematurely requires Admin / SuperUser to reopen.

ISS Dashboard

Audience: Dean, Admin, Core Team.

Where to find it: Sidebar ! ISS Dashboard.

What it is: Today's ISS assignments, with arrival/departure timestamps, work-completed checklist, and end-of-day reporting.

STEPS

1. Open ISS Dashboard.
Today's roster, color-coded by status.
2. Check in arrivals, check out departures.
Timestamps logged.
3. End-of-day ! ISS Reporting.
Generates the day's summary; editable / deletable from the log.

16. Admin & Tenancy

End-of-demo. Show that there's a clear path to set this up. Don't overload.

Settings Hub

Audience: Admin.

Where to find it: Sidebar !' Settings.

What it is: All school-level configuration grouped into 7 gradient-headed sections: Getting Started, School Identity, People & Access, Hall Pass & Locations, Behavior & PBIS, Family & Signage, Admin & Tenancy.

STEPS

1. Open Settings.
Gradient section bars with live progress count for Getting Started.
2. Click any tile to open that editor.
Back bar at the top to return to the Hub.
3. 'Next 3 steps' cards in Getting Started deep-link to the matching tile.
Audience never has to hunt.

TIPS

- Show the gradient sections — the visual chunking is what makes the Settings page un-scary.

Onboarding Checklist

Audience: Admin (during initial setup).

Where to find it: Settings !' Onboarding, or Admin Hub bell.

What it is: A weighted progress checklist. Steps auto-detect when possible (a feature is on, a template exists, a pickup tag is issued, a bell schedule is default). Manual steps are 'I understand' markers for governance items. Phase + role grouping so each role sees their own work.

STEPS

1. Open Onboarding.
X / N complete shown in the header. Partial steps count as 0.5.
2. Phases collapse / expand.
Inside each phase, steps are grouped by role: admin / tech-coordinator / PBIS-coordinator.
3. Clicking a step jumps to the matching settings tile.
Mapping kept in App.tsx (step-id !' tile-id).

TIPS

- Export the checklist to PDF for a kickoff meeting agenda.

Staff & Roles

Audience: Admin / SuperUser.

Where to find it: Admin Hub !' Staff & Roles.

What it is: Roster of every staff user with their role flags. Bulk-assign roles, bulk-issue temp passwords, edit feature gates, reset to temp password.

STEPS

1. Open Staff & Roles.
Filterable, bulk-selectable.
2. Edit role flags.
Multi-select; flags applied immediately.

3. 'Reset to temp password' from the row menu.
Single-shot helper for stuck users.

Bulk Feature Picker

Audience: SuperUser / District Admin.

Where to find it: Settings (Admin & Tenancy section).

What it is: Pick from a list of feature modules; apply ON/OFF state in bulk to one or many schools.

STEPS

1. Open Bulk Feature Picker.
Module list + school list.
2. Select schools and modules.
Apply.
3. Two-tier flag AND check enforced.
District flag AND school flag must both be ON.

District / SuperUser Tools

Audience: SuperUser only.

Where to find it: Sidebar !' SuperUser Home.

What it is: District-wide rollups, Onboard-a-District wizard, Onboard-a-School (existing district), edit/soft-delete districts and schools, Audit & Health panel.

STEPS

1. Open SuperUser Home.
District + school rollups.
2. Onboard-a-District wizard.
Step-by-step setup for a brand-new district.
3. Onboard-a-School wizard.
Adds a school to an existing district.
4. Audit & Health panel.
Recent admin actions across the district; system health metrics.

17. Closing the Demo

Don't end on a feature. End on confidence.

What to Leave Them With

Audience: You.

Where to find it: —

What it is: Recap. Anchor on the three things this school will see in week one.

STEPS

1. Recap the three highest-leverage screens for THIS school.
If they're PBIS-heavy, lead with Hub + Spotlight + signage. If they're a discipline-heavy middle school, lead with Investigations + ISS + Pickup.
2. Show the Onboarding checklist again.
'This is your first week. Step by step. Most of it is auto-detected.'
3. Offer the data importer as the on-ramp.
'Send your roster CSV and we'll import it together on day one.'
4. Mention the user guides.
Teacher User Guide and Core Team User Guide PDFs are generated from the live app; you can hand them out the day the school goes live.

TIPS

- Don't promise features that aren't licensed for that school's plan. Mention them as 'available' rather than 'included.'

After the Demo

Two follow-up artifacts: (1) hand the buyer the matching User Guide PDFs (Teacher User Guide and Core Team User Guide are generated from the same live source). (2) Schedule a 90-minute onboarding call to walk the Onboarding checklist together. Most schools finish setup in two sessions.

This guide is regenerated from the live app every time features change. The version you are reading was generated on the date stamped in PDF metadata.
