

Hall Pass Demo Run-Book

Presenter guide · what to print · equipment · step-by-step script

Hall Pass Demo Run-Book

A complete, presenter-ready guide for demoing the **Hall Pass Kiosk** to a school: what to print, the equipment you need, one-time setup, and a step-by-step script for running a live demo classroom with a working kiosk.

1. What you're demoing (the 30-second pitch)

A tablet by the classroom door becomes a **self-serve hall pass kiosk**. A student taps their ID, picks where they're going, and walks out — no paper slip, no teacher interruption. If too many students are already out (cap of 5), or two students who shouldn't be in the hall together try to leave, the kiosk **holds them in a digital line** and calls them up when it's their turn. The teacher watches the whole thing from a small panel in the app, and the front office can see every active pass on a hallway TV.

The "wow" moments to land in the demo: 1. **Tap-and-go** sign out with a destination. 2. **"I'm Back"** return that automatically calls the **next student in line**. 3. The **keep-apart block** (two students can't be out together). 4. The **period reset** — the line clears itself when the bell rings.

2. Equipment checklist

#	Item	Purpose	Notes
1	Tablet or laptop (the "kiosk")	Runs <code>/kiosk</code> by the door	iPad / Android tablet / Chromebook all work. A stand or case is a nice touch.
2	Camera on that device	Scan activation card + student badges	Built-in webcam/front camera is fine. Needed if you want to demo QR scanning.
3	A second device (phone or laptop)	The teacher view — logged into the app	This is the presenter's "control panel."
4	(Optional) A TV or monitor	Hallway Active Hall Pass signage	Any screen that can open a browser, or a real signage TV.
5	(Optional) A printer	Print the activation card + student badges	Color not required; QR codes scan fine in black & white.
6	Reliable Wi-Fi	All devices need the app	Test the network in the demo room ahead of time.
7	The app URL	e.g. <code>https://<your-app-domain>/</code>	Use your live published domain, not the preview link.

Minimum viable demo = **2 devices** (one kiosk tablet + one teacher phone) on Wi-Fi. Everything else is polish.

3. What to print

Print these **before** demo day. All are generated from inside the app (admin login required).

A. Kiosk Activation Card (1 page) — required

- **What it is:** A single sheet for the demo room with the room name, teacher name, a **QR code**, a **barcode**, and a **6-digit PIN**.
- **Why:** It's how you turn a blank tablet into this room's kiosk in seconds.
- **Where to get it:** Admin → **Settings** → **Kiosk Cards** panel → generate / download the cards PDF, then print the page for your demo room.

B. Student ID Badges (1 per demo student) — recommended

- **What it is:** A badge/card per student with a **QR code** that signs that student into the kiosk instantly.
- **Why:** Tapping a card on the camera is far more impressive than typing an ID.

- **Where to get it:** Admin → **Settings** → **Student Badges** panel → print badges for the 2-3 students you'll use in the demo.

C. (Optional) A printed "cheat sheet" for the presenter

- The student IDs/names you'll use, in order, plus the demo script (Section 6).
- Keep it in your hand or taped to the back of the teacher device.

No per-pass paper. The system is intentionally paperless for the passes themselves — that's part of the value. The only printing is the one-time activation card and the reusable student badges.

4. One-time setup (admin, ~15 minutes)

Do this once, ahead of demo day, signed in as an **admin / Core Team** user. Each step below has to be done in order, because each one unlocks the next.

1. **Turn the feature on (licensing).** The school's plan must include **Hall Passes**. If the Hall Pass screens are missing entirely, this is the cause — confirm `hallPasses` is enabled for the school's license before anything else.
2. **Enable the Hall Pass toggle.** **Settings** → **School Settings** → switch the **Hall Pass** feature **ON**.
3. **Set a default Bell Schedule.** (This is the important one — see the prerequisite note in the project README.) **Settings** → **Bell Schedules** → create or pick a schedule and mark it the **default**. This is what makes the line **auto-clear when the period changes**, giving each class a clean line. Without it, the queue falls back to a 45-minute idle timer — usable, but you lose the "bell rings, line resets" demo moment.
4. **Configure Locations (rooms + destinations).** **Settings** → **Locations**: - Add your **demo room** as an **origin** (kiosk-visible). - Add a few **destinations**: Restroom, Nurse, Front Office, Water. - Create the **allowed destination** pairs so the demo room can reach those destinations. - Shortcut for a demo: use **"Wire all classrooms"** to auto-create a full mesh of room→destination pairings, so you don't hand-build them.
5. **Pick your demo students and (optionally) create a conflict.** - Choose **2-3 students** from the roster and note their **student IDs** (you'll type these, or scan their badges). - To demo the **keep-apart block**, flag **two of them as keep-apart** (a "polarity"/keep-apart pair) so the kiosk refuses to let them both be out at once. - (Optional) Set a **daily limit** on one student to demo the "you've hit your limit" message.
6. **Smoke-test it yourself** once, end to end (Section 6), the day before.

5. Activating the kiosk (do this ~10 min before you present)

Pick **one** of these to turn the demo tablet into the room's kiosk:

- **Scan the card (best for the demo):** On the tablet open `.../kiosk`, choose **"Use this camera,"** and hold the printed **Activation Card** up to it.
- **Type the PIN:** On `.../kiosk`, enter the **6-digit PIN** from the card.
- **Phone hand-off:** Scan the card's QR with your phone, it opens `.../kiosk?enroll=<token>`; or, as admin, use **"Activate sub"** to open the tablet pre-activated.
- **Fallback:** Sign in with a staff email + password on the tablet.

Once activated, the tablet **remembers** it's this room's kiosk (stored on the device) — you won't have to log in again during the demo. Leave it on the sign-in screen.

Optional second screen: open the **Phone View** mirror at `.../kiosk-view/<token>` on a phone or the TV — it shows the same live line read-only, great for the audience to watch while you drive the kiosk.

6. The live demo — step-by-step presenter script

Setup in the room: **Kiosk tablet** on a stand by the "door." **Teacher device** in your hand showing the **Companion Queue** panel. (Optional) **TV** showing the active-pass board or the Phone View mirror.

Scene 1 — A normal hall pass (the happy path) 1. "Imagine I'm a student who needs the restroom." On the **kiosk**, scan Student A's **badge** (or type their ID) and tap **Out**. 2. Pick **Restroom** from the destination list. → The kiosk confirms they're out. 3. Hold up your **teacher device**: "From here I can see exactly who's out, where they went, and for how long — without stopping my lesson." Point to the live timer.

Scene 2 — The line forms (capacity cap) 4. Sign out a couple more students the same way until you approach the cap. "The system only allows **5 students out at once** — no hallway hangouts." 5. Try to send **one more** student out. → The kiosk puts them in the **waiting line** instead of issuing a pass. "They're not denied — they're queued."

Scene 3 — Keep-apart safety block 6. With Student A still out, have **Student B (the keep-apart pair)** try to go **Out**. → The kiosk **blocks** it with a keep-apart message. "Admin decided these two shouldn't be in the hall together — the kiosk enforces it automatically, so staff don't have to remember."

Scene 4 — Return calls the next student 7. Bring **Student A** back: on the kiosk, scan their badge and tap **"I'm Back."** 8. → The kiosk immediately shows a **"Next Up"** prompt for the first eligible student in line. "The moment a spot opens, the next student is called — the

line manages itself." 9. On the **teacher device**, show that you can **reorder** or **remove** anyone in the line by hand if you need to.

Scene 5 — The bell resets the line 10. "When the period ends, nobody carries over." Explain that at the **bell** (per the default bell schedule) the line **wipes clean** so the next class starts fresh. (If you want to show it live, set the demo bell schedule so a period boundary falls during your session.)

Scene 6 — The hallway view (optional) 11. Point to the **TV**: "Meanwhile the front office sees every active pass building-wide on the hallway display." Show the active-pass board or the Phone View mirror updating in real time.

Close: "Paperless, safer, and the teacher never stops teaching."

7. Pre-flight checklist (morning of)

- [] All devices on the demo Wi-Fi, app loads on each.
 - [] Kiosk tablet **activated** to the demo room (sign-in screen showing).
 - [] Teacher device logged in, **Companion Queue** panel open.
 - [] 2–3 student **badges** printed and in hand (or IDs on your cheat sheet).
 - [] Keep-apart pair confirmed; one daily limit set (if demoing that).
 - [] Destinations show up on the kiosk for the demo room.
 - [] (Optional) TV showing the active-pass board / Phone View.
 - [] You've run the full script once successfully.
-

8. Troubleshooting

Symptom	Likely cause	Fix
Hall Pass screens missing in the app	Licensing <code>hallPasses</code> off, or School Settings toggle off	Enable licensing, then Settings → School Settings → Hall Pass ON
Kiosk won't activate from the card	Camera permission blocked, or card expired	Allow camera in the browser; regenerate the card; or use the 6-digit PIN
No destinations appear on the kiosk	Locations/allowed pairs not set for the room	Settings → Locations → add destinations + allowed pairs (or "Wire all classrooms")
Line doesn't reset between classes	No default bell schedule	Settings → Bell Schedules → mark one as default
Student "can't sign out" unexpectedly	Keep-apart pair or daily limit hit	Expected — that's the safety feature; explain it, or clear the flag
Kiosk logged itself out	Device cleared its storage / token expired	Re-activate with the card or PIN
QR scan won't read	Glare or low light on the printed code	Tilt the card, improve lighting, or type the ID/PIN

9. Quick URL reference

Replace `<your-app-domain>` with your **live published domain**.

- **Kiosk (student-facing):** `https://<your-app-domain>/kiosk`
- **Activate from card QR:** `https://<your-app-domain>/kiosk?enroll=<token>` (card generates this)
- **Student badge auto-sign-in:** `https://<your-app-domain>/kiosk?signin=<studentId>` (badge generates this)
- **Phone View (read-only line mirror):** `https://<your-app-domain>/kiosk-view/<token>`
- **Teacher control:** sign into the app → **Companion Queue** panel
- **Print activation cards:** Admin → **Settings → Kiosk Cards**
- **Print student badges:** Admin → **Settings → Student Badges**
